

About our Program

- A full spectrum family medicine residency program with academic affiliation and faculty from the University of Cincinnati
- A longstanding commitment to care for under-resourced communities in Cincinnati, across the U.S, and around the globe
- Teaching our family medicine residents to manage the responsibilities of trusting, symbiotic relationships remains a central value to our curriculum

Megan Rich, MD
Program Director

What you can expect from us

- Consistent resident schedules
- Small group of clinic faculty
- Operationally excellent practices
- Cohesive and stable clinic teams
- A training culture that emphasizes a growth mindset

The Christ Hospital/ University of Cincinnati Family Medicine Residency Program

A formative experience
for residents

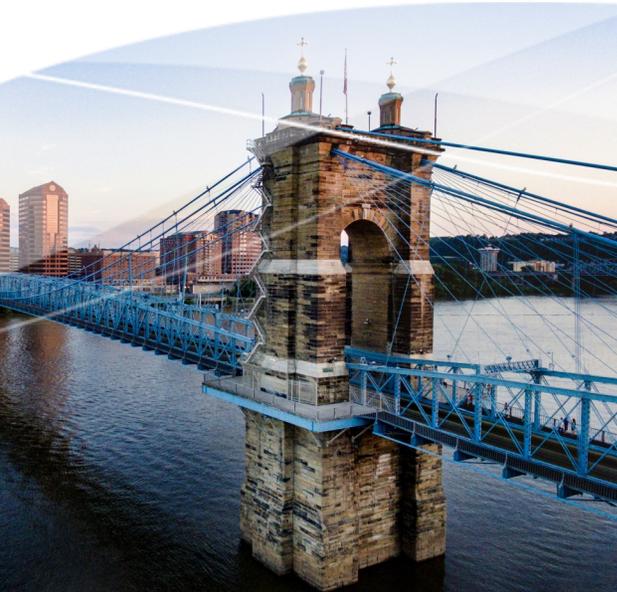

Learn. Lead. Change.

Look at what TCHUCFM residency has to offer:

The Family Medicine Center: The FMC is the heart of the program. This is the outpatient continuity location where we see patients for the entirety of our residency

Global Health: A pioneer in the Global Health field, we have a long-standing commitment to train physicians to lead and serve in healthcare for underserved and vulnerable populations both in the U.S. and internationally

Underserved Care: Residents receive extensive training in cultural competency, the racial history of our city, and social determinants of health, and advocacy

2X2 CURRICULUM

What is a 2x2 curriculum?

“2x2” is a curriculum by which residents alternate between two weeks on a specialty rotation followed by two weeks of a longitudinal outpatient experience throughout the year. Continuity clinics get built into the schedule exclusively during the outpatient two week blocks.

What are the benefits of training in a 2x2 curriculum?

- Decreasing “whiplash” between dual responsibilities for an inpatient service and continuity clinic in the same day or week
- Additional opportunities for longitudinal electives/experiences built into the outpatient 2 week blocks
- Overall higher volume of time in our Family Medicine Center while maintaining our quality inpatient training experiences
- Additional opportunities for interdisciplinary approaches to population health through more time for patient registry management
- Residents are in the clinic the same days all year, which improves patient scheduling and continuity in the clinic
